

Powerful, easy-to-use Enterprise Mobile Management (EMM)

-  Android for Enterprise
-  Apple VPP
-  Geo-fencing
-  Apple DEP
-  Corporate and Public App Stores

Certero for Mobile addresses the key challenges associated with EMM.

Simple administration makes enrollment, configuration, integration, control and application management quick and easy, with minimal impact or disruption for end users.

Device inventory

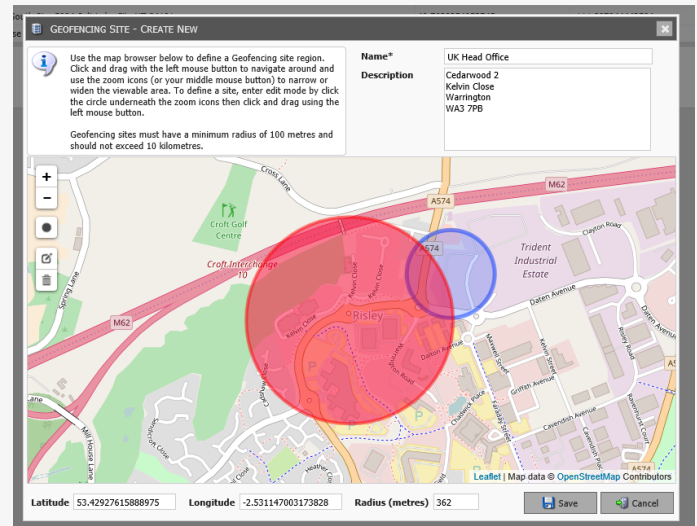

All enrolled devices present a comprehensive inventory back to Certero for Mobile, enabling administrators to have full visibility of all the mobile devices across the estate. The type of information that is gathered includes:

- Manufacturer
- Model
- Assigned User
- Platform (iOS, Android)
- Version
- Storage (including available space)
- Phone Number
- Mobile Network Provider
- SIM Serial Number
- Applications (Name, Version etc.)

Security

Certero for Mobile features advanced security throughout, covering all the bases. Corporate data is kept safe and separate from the user's own private data in a BYOD scenario. Security features include:

- Remote wipe or disablement of lost or stolen devices
- Geo-fencing – enforce restrictions on which locations your devices should be located at and alert you if any devices breach these restrictions
- The ability to detect and disable or wipe jailbroken or rooted devices
- Enforcing strong corporate password policies

Enterprise BYOD

Certero for Mobile has been designed to support both personal and corporately owned devices to ensure you can easily incorporate a BYOD policy into your overall IT infrastructure. The configurations applied to devices can be defined based on ownership, so that organizations can easily maintain separate policies for each type of device.

Android for Enterprise

The Android for Enterprise capability enables organizations to separate business applications, supporting employees as they use the same Android device for both personal and work purposes.

Apple VPP

By simply logging-in to the VPP portal and downloading the token for your account and adding it into Certero for Mobile, organizations are able to gain full visibility of their VPP licenses and their utilization.

Device enrolment (including Apple DEP)

Certero for Mobile simplifies the enrollment process, providing a fast and intuitive solution that requires very little user intervention. There are several ways to enroll user devices with Certero for Mobile:

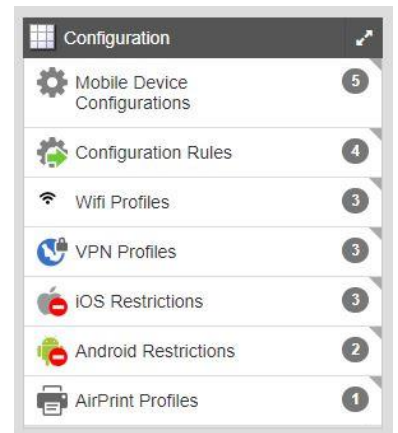

- Apple DEP (Device Enrollment Program) – zero-touch configuration for IT across Apple devices
- Bulk enrollment – using QR codes, allows Administrators to quickly enroll devices
- Certero for Mobile App – individual users can download the App and self-enroll using the built-in wizard
- Certero for Mobile Bump – which uses an NFC ‘bump’ to pass information from a ‘parent’ device to ‘child’ devices being enrolled into Android for Enterprise

Device configuration

Certero for Mobile facilitates easy application of configurations made up of a number of definitions regarding the options and features. The following definitions or building blocks are created within Certero for Mobile:

- Wi-Fi
- VPN
- Secure password policies
- Device restrictions
- Compliance settings
- Kiosk Mode
- AirPrint printers
- Company apps
- Apps from public app stores
- Blacklisting apps from devices

Configurations are applied to users based on a set of criteria that is defined within Certero for Mobile, this enables the automatic assignment of configurations to users, streamlining the ongoing management of mobile devices.

Corporate and public app stores

Certero for Mobile provides organizations with a simple and easy to use mechanism to publish applications to their users. Corporate applications are directly uploaded to the Certero for Mobile server which then processes all user installation requests, allowing for software that is not available on any of the public application stores to be easily delivered to client devices.

Applications that are available from any of the major public app stores can also be presented to end users, allowing them to quickly access the applications relevant for their job role. Administrators are able to define policies within Certero for Mobile to define exactly which applications are made available to end users.

Benefits

Certero for Mobile meets all the challenges of mobile device and application management and offers numerous benefits:

- One of the most cost effective EMM products available
- Delivers accurate inventory of enrolled mobile devices
- Secure, easy-to-use solution
- Covers the major mobile device operating systems
- Enforce secure password policies
- Customize device configurations

Certero is a leader in the development, delivery and enablement of Cloud-ready, easy to use, enterprise-level solutions that modernize IT hardware & software asset management and help drive organizational transformation. Easy to do business with and applying our unique architectural advantage, complemented by world-class services, we deliver single pane of glass visibility and control across even the most complex estate, from mobile to mainframe.
